Sow Uterine Lavage Solution

"We feel that Refresh has a huge benefit for those sows that had any difficulty farrowing or had to be sleeved to assist in the farrowing process. Its contents and volume helps flush out any contaminants that were drug into the uterus by the person assisting the sow and thus reducing antibiotic treatments. Many of our clients feel that it is product is so effective they are using it on every sow within the first 24 post farrowing. With the prices for semen, the cost of elite females and the value of pigs currently this product is a no brainer to use on every showpig operation."

*-Dr. Daniel Hendrickson DVM
4 Star Veterinary Services*

**Refresh is used in the Niman Ranch Sow Centers to reduce antibiotic usage*
